

## Mexico Energy Intelligence®

Subscription services and rate plans

**O**UR RESEARCH SERVICE provides both hard data and soft knowledge about the people, institutions, and legal & commercial frameworks of the Mexican energy sector. Our reports help subscribers to anticipate the outcomes of evolving legal, policy, institutional and commercial conditions in the energy sector. Subscribers gain an appreciation of the background and nuances that make up Mexico's inside baseball.

By staying at the interface between commerce, institutions and public oversight (Fig. 1), we provide subscribers with tools, data and an outside assessment of the operating environment in Mexico in its legal, regulatory and commercial dimensions.

We are advocates of an energy regime in Mexico that is globally connected, with strong public oversight and state energy companies that can operate outside of Mexico alone or in joint ventures. We assess legal, policy and regulatory developments from this perspective; we are watchful for the reappearance of ideological positions that are repackaged as market-friendly concepts. A log of report titles is attached.

### Subscription rate plans for 2015

†An administrator may post to a library intranet  
 ††Scholarships available

### Subscription to Mexico Energy Intelligence®

Subscribers from a half-dozen countries are IOCs, NOCs, pipeline and power companies, regulators, law firms, university libraries and embassies. We help subscribers guard against making errors in their planning for policy and business development.

We offer subscribers several ways to project their values and presence in policy circles and the marketplace, as by advertising and interviews posted on our website, <http://www.energia.com>. We offer rate plans for several classes of subscribers (see table).

### Sponsorship of Dictionary of Mexican Energy

In collaboration with the Law School of the Public University of Nuevo León (FACDYC) we are preparing a Dictionary of Mexican Energy. The goal is to identify and define the many new legal, institutional and regulatory terms that, together, constitute the formal operating environment. Attached are illustrative pages of our inventory of key terms in the CNH's Round One bidding guidelines, issued December 11, 2014.

At the sponsor's option, we recognize support by a placement of its logo on our website. Amounts in support above \$5,000 on an annual basis will be applied to the subscription rate to Mexico Energy Intelligence®.
